

BJÖRNAX AB SMOKE PRODUCTS

Smoke, your tool for a cleaner environment and increased security

Björnax AB

We are investing in the future. The majority of our standard products are manufactured by fully automatic machines. A documented production control guarantees the quality of our products. Björnax AB is an environmentally certified company according to ISO 14 001 since 2000, and an active environmental commitment is part of our daily operations.

Just Smoke ?

If it were that easy, then our researchers could have saved themselves over 50 years of work!

One basic requirement is that test smoke has to suit the environment in which it is being used, be adapted for the ambient temperature, humidity, wind speed, contaminants and light conditions.

The particle size must also be a correct match.

The smoke should have the same density as the surrounding air—an important feature for the smoke to be able to follow even the tiniest air stream.

Smoke for exercises or environmental work must be gentle so as not to cause irritation for humans or for animals when used in agriculture.

Of course, it is also important that the products are safe to use, handle and transport.

We export more than 83% of our production. We supply numerous countries via our extensive network of distributors. If you are interested in our products, we invite you to contact us for more information about the nearest distributor or retailer in your area.
